

# C M Dubey Post Graduate College, Bilaspur

## Method of calculating average footfall per day:

To calculate average footfall for the central library, we have taken into account the average of all the students and faculties visiting library for a random week of 5 days (cumulative number).

$$\text{average footfall per day} = \frac{\text{Total Footfall for 5 days}}{5}$$

S. No.	Date	No of Students visiting library	No. of faculties visiting library	Total number of users visiting library
1	16-09-2019	11	06	17
2	17-09-2019	04	11	15
3	18-09-2019	08	05	13
4	19-09-2019	02	06	08
5	20-09-2019	04	06	10
			Total	63

$$\text{average footfall per day} = \frac{63}{5} = 12.6 \text{ (rounded off to 13)}$$

## Method of calculating average percentage footfall per day:

To calculate average percentage footfall for the central library, we have taken average footfall per day (as calculated above) and is used to calculate percentage by dividing it with total number of faculties and students which is then multiplied by 100.

$$\text{Percentage footfall per day} = \frac{\text{average footfall per day}}{\text{total number of faculties and students}} * 100$$

$$\text{Percentage footfall per day} = \frac{12.6}{4390} * 100 = 0.28\%$$
